Teacher Conference

Small hands, big ideas: discover free STEM resources for ages 3-7

Leaders from the STEM sector are coming together to showcase their top free primary resources. Find inspiration for your lessons.

Sarah Dagnell, Explorify

Catherine Davies, CREST

Marissa Rauth and Peter Jeffrey-Bourne, Science Museum Group

Carol Davenport, NUSTEM

Chris Lawson, Primary Science Teaching Trust

Welcome, please be aware:

- Talks are recorded.
- There will be time for questions at the end.
- You can send messages in the chat or raise your hand.

STAR

Introducing CREST Star...

For young learners at the beginning of their STEM journey, getting hands-on with engaging investigations is key!

With **over 25 challenges to choose from at Star level**, covering a range of STEM topics and themes, all **CREST resources are free to browse and download** from the online Resource Library

Children can track their progress as they work through the activities using a Star Passport

Once they've completed **at least 6 challenges**, they can be recognised and **rewarded with a CREST Award certificate!**

STAR

Colourful, fun and engaging resources

Choose from a range of topics and themes, all with **real-life contexts**, allowing children to make links with their own experiences

Flexible plans and editable versions of some resources mean that **challenges can be adapted** to the needs of your learners, ensuring that everyone can access the activities

Story scenarios and relatable characters help to capture children's interest, whilst the use of simple, readily-available equipment makes CREST easy to run

Plenty of opportunities to **take the learning outside**, plus suggestions and prompts for **cross-curricular follow-on activities**

STAR

Supporting classroom slides

Many Star level challenges come with classroom slides, to support understanding and engagement

Sneaky Shadow

Seren is worried.

I've lost my shadow. It was there when I was outside playing. It was there when I walked home from school. Now it's gone.

What makes a shadow?

I think shadows hide when it goes dark.

I think you can only see your shadow when the sun is shining.

I think you will see your shadow if there is bright light.

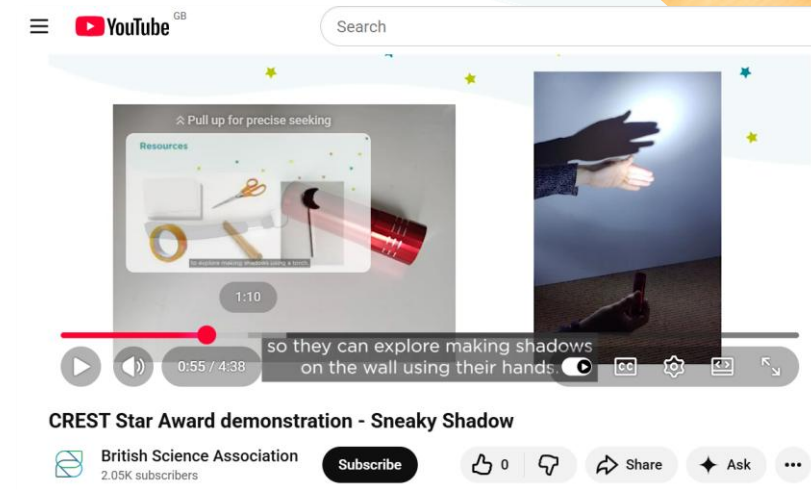

How can you find out?

torch

It is getting dark outside.

It was under the outside light, but it disappeared when it went off!

I can help you find your sneaky shadow with this torch!

Short demonstration videos

Brief demo videos are also available for many activities, so you can quickly get up to speed with how to run the challenges

STAR

Find out more and get started by visiting the CREST website!

How to run

Plan

Explore our free activities in the Resource Library and pick the ones you want to do with your children.

You can also choose your own activities. Pre-order your Star certificates to have them ready for your event!

[Browse Resource Library](#)

1

Explore

Select and run at least six Star activities.

This is the fun part! Children take on the role of investigators, while you use the organiser card for the activity.

2

Apply

Create a free account on our application platform to order your certificates.

Complete the application, pay for the Star certificates and they will be delivered to your delivery address.

[Apply now](#)

3

Achieve!

Celebrate the incredible achievement of the children as they earn their Star CREST Awards!

Share your experience with us or tag us in your posts. Let's spread the joy and inspire others with the children's success!

[Share your experience](#)

CURIOSITY
GAME

TALKING	Age	5-7	Topic	WORKING SCIENTIFICALLY	⌚ 40 MIN
	Skills used	CURIOSITY AND ASKING QUESTIONS • MAKING OBSERVATIONS TESTING • COMMUNICATION • TEAMWORK			

Overview

The aim of this activity is to work out what's inside a sealed set of boxes. This is a playful game which introduces the key skills and behaviours used in science, technology and maths.

Introduction

This activity is a playful way to practise, and recognise, the skills associated with science. The start of a child's science learning journey is about sparking curiosity and developing their skills to explore the world around them. Science is a creative and imaginative human process. It is a way of thinking, asking questions and observing the world around us to come up with explanations about how things work. Both science and play are discovery learning approaches where you can take risks, make mistakes and try again. This activity demonstrates such a shared approach and opens up opportunities to 'work scientifically' and further develop key science and maths skills.

Exploring science through play

Exploring science through play provides a natural, and inclusive, way of engaging young children with science, while also allowing them to experience the positive feelings and emotions associated with play. These include:

- **Choice and freedom** – the ability to choose and have agency in the experience
- **Wonder and curiosity** – to be captivated, intrigued, amazed, actively engaged
- **Delight and joy** – to experience feelings of enjoyment, satisfaction, happiness

Scientists themselves recognise and celebrate the playfulness in science, and many scientific discoveries have been made through playful exploration.

"We sometimes forget about the creative part of science. I think you need time to daydream, to let your imagination take you where it can."
Elizabeth Blackburn, English/Australian biologist

[sciencemuseumgroup.org.uk/resources](https://www.sciencemuseumgroup.org.uk/resources)

Highlights and develops skills

Builds confidence in adults

Explores STEM through play

SCIENCE
MUSEUM
GROUP

How to run the activity

Tip: A set of three curiosity boxes, three empty test boxes and three sets of testing objects will be suitable for a group of 12 people working in groups of four. Double or triple the quantity when working with larger groups.

[sciencemuseumgroup.org.uk/resources](https://www.sciencemuseumgroup.org.uk/resources)

Promotes science talk

Follow these steps...

5 Testing: conclusion

Once all the boxes have been investigated, get the groups to decide which object they think is inside each box and place it on the corresponding box on the observation sheet. If you look around the room, are everyone's conclusions the same? Now you can allow the groups to open the sealed boxes to reveal what was inside.

6 Skills

Encourage everyone to reflect on the skills they used while investigating the boxes. Record their responses. Highlight that these are all 'science-y' skills – and everyone has them. Science is all about being curious and exploring the world around us.

Think and talk about...

- Think about all the different skills that are used when playing games or doing other activities (eg when playing sports or doing art and craft). Discuss whether any of those skills are the same as the ones the students used in the Curiosity Game.
- Talk about what jobs might use these skills, and if they know anyone who uses those skills.
- In the classroom, put up a list of the science skills and talk about them in future lessons and other activities.

Investigate and adapt...

- Make the activity more sensory by using 'feely bags' to explore the different shapes and materials of the objects using touch. Or you could use objects with different fragrances and explore them using smell.
- Use other simple equipment such as weighing scales, magnets, water and bowls (eg to test floating and sinking) to support further investigation.
- Bring in maths themes by measuring the weight and sizes of the boxes and the objects.
- Build language and vocabulary, eg by highlighting all the verbs or adjectives that are used in the activity.
- Get students to role-play jobs or characters using the scientific skills highlighted in the game.

Builds confidence and ownership

CURIOUS THINGS IMAGE BANK: OVERVIEW

COVER PAGE

Images in this pack

All images © The Board of Trustees of the Science Museum, except where stated otherwise

IMAGE BANK CONTENT OVERVIEW

See, Link, Wonder questions

Use these **See, Link, Wonder** questions to foster curiosity and to spark even more questions.

See...

- What do you notice first? Prompts might include: What colours can you see? What shapes can you spot?

Link/Move...

- What do you find interesting or surprising about the object?
- Does it look like anything you have seen before?
- Can you shape yourself to look like it?

Wonder...

- What stories do you think it could tell you? How might it work? Who used it?
- What would you like to know about it? How could you find out?

INTRODUCTION & HOW TO USE

IMAGES

Handmade radio receiver, 1922

Before television and computers, radio was a way that people could listen to the news or to music in their homes. Some people even built their own radio equipment, like this home-made radio from 1922.

What shapes can you see?
What do you think all the different parts might do?

University
NEWCASTLE

Play, Be, C

Supporting teachers and other adults in EYFS to provide high-quality STEM education.

Linked to literacy development through a story book.

Flexible and adaptable to your setting.

Attribute focused

nustem

Arborist

Arborists look after trees and make sure they are healthy. Arborists are sometimes called Tree Surgeons.

Observe and find out about the trees in your setting with activities for each season.

Civil Engineer

Civil engineers plan, build and manage big structures such as buildings, railways and bridges.

Develop and extend construction play with a focus on planning and problem solving.

Fluid Scientist

Fluid scientists are interested in what liquids and gases are like and how they move and behave.

Investigate bubbles by making them in different quantities and sizes.

Glaciologist

Glaciologists study glaciers – huge areas of ice found on mountains or near the North and South poles.

Investigate freezing and melting in a variety of ways.

Lighting Technician

Lighting technicians design the way lights are used in films, concerts and theatre, or to light up buildings, statues and bridges.

Make, use and explore resources to create light and shadow.

Magnet Engineer

Magnet engineers design magnets or machines that use magnets.

Discover more about magnetism and how magnets can be used to push and pull.

Marine Engineer

Marine engineers make and fix boats and ships, submarines, oil rigs and drilling equipment.

Explore floating, sinking and water displacement.

Meteorologist

Meteorologists use measuring equipment and make forecasts of what the weather is going to be like.

Make and use equipment to observe, measure and record the weather.

Pharmacist

Pharmacists prepare and give medicines to people who have a prescription.

Count, measure, sort and create patterns while making pills and medicines to dispense to customers.

Robotics Engineer

Robotics engineers design, build and program machines to do jobs more easily than a human could.

Program simple robots and learn about giving and following directions.

- Odd one out

What is the same and what is different?

buttercup foxglove

The image shows two photographs of flowers side-by-side. The left photograph is a single yellow buttercup flower with a dark center, set against a black background. The right photograph is a cluster of purple foxglove flowers hanging from a stem, set against a green background. Below each photograph is its name in green text: 'buttercup' and 'foxglove'.

Promotes skills:

- Observation
- Science talk

EARLY YEARS SCIENCE PROVISION MAP

Play, Observe & Ask

Sensory Play

Learn: how biscuits change in different liquids

You need: bowls, mini gingerbread man biscuits, milk, vinegar, oil, juice, timers

Play, observe & ask

- What does the (solid) biscuit feel /look/smell like?
- What might happen if the gingerbread man falls into puddles of different liquids? Can you make predictions and test out your ideas? How long shall we leave them?
- Was your prediction about the [liquid] correct? Can you describe how they look, feel, smell now? Are you surprised? Why?

Malleable Play

Learn: that some materials are stretchy

You need: gingerbread dough, pastry, Curly Wurly®, marshmallows, spaghetti

Play observe & ask:

- Can we stretch all these foods?
- Which can be stretched the longest?
- Can they go back to their original shape? Why / why not?

Outdoors

Learn: that some materials absorb liquids.

You need: trays containing cornflour, rice, rice crispies/corn flakes, pasta, oats, grapes, raisins, lentils, jugs of water, spoons to stir, cloths to wipe messy hands

Invite children to use their hands to explore the different trays of food before adding water.

Play, observe & ask:

- How do they feel/look/smell?
- What do you predict will happen to each tray if we pour on water? Which might change? Will any stay the same? Why?
- What would you like to find out next? E.g. what happens when changing the temperature of water, leaving raisins overnight. Encourage the children to test out their ideas and use their senses and lots of descriptive language to explain what happens.

Construction

Learn: some objects float and some sink.

You need: junk modelling resources, tape, glue, scissors, gingerbread men biscuits, pebbles, cubes

Play, observe & ask:

- Can you make a floating boat for the gingerbread man? Which materials will you use? Why?
- Does it matter what shape or size your boat is?
- How many gingerbread men/pebbles/cubes can it hold before it sinks?

Small World

Learn: how to build strong bridges

You need: lolly sticks, variety of clothes pegs, toy animals from the story, gingerbread man

Play, observe & ask:

- Can you use the different lolly sticks and pegs to make a bridge for the gingerbread man to cross the river?
- Which types of clothes pegs work best?
- Can you improve your design to make it stronger? How many toy animals can it hold?

Role Play

Learn: common features of different animals

You need: pictures/masks/costumes of different animals from the story

Play, observe & ask:

- How are the animals the same/different?
- Do they all have four legs/a tail/fur/teeth?
- Can you show me how they move?

Water/Sand Play

Learn: waterproof materials

You need: gingerbread man biscuits, a selection of materials e.g. kitchen roll, foil, cling film, tissue paper, bin bag, fabric, plastic containers, tape, watering cans

Encourage children to put the gingerbread man in a container and use different materials to make a 'roof'.

Play, observe & ask:

- Which material will keep him dry from the (watering can) rain?
- Which material would make the worst roof? Why?

Key Science Vocabulary

material, solid, liquid, absorb

properties of materials - dry, wet, soggy, waterproof, float, sink, strong, stretchy

animal body parts - legs, body, head, ears, tail, mane, fur, udder, etc.

Further Science

Exploring how heat/cooking changes materials, e.g. malleable gingerbread dough to hard biscuit, jelly dissolving, eggs becoming opaque, chocolate melting, popcorn exploding!

Tasting experiments, e.g. sweet gingerbread, sour lemon slices, salty crisps. Can children guess which flavour (even if they hold their nose)?

Comparing types of animal teeth, e.g. fox, cow, mouse. What do they eat?

Any questions?
